SUMMARY

Full Stack developer focused on building web applications with Java Spring Boot and React. Experienced designing and securing REST APIs, working with relational databases through JPA/Hibernate, and connecting frontend interfaces to backend systems end-to-end. Has built and deployed projects spanning task management platforms, data dashboards, and real-time control interfaces. Looking for full-stack or backend engineering roles where I can build and ship real products.

EDUCATION

VIT University — B.Tech, Electronics and Computer Engineering

Expected May 2027

Chennai, India | CGPA: 8.99 / 10.0

- Relevant Coursework: Data Structures & Algorithms, Computer Networks, Database Management Systems, Artificial Intelligence, Embedded Systems

PROJECTS

Task Management Application (ToDo App)

2026

Spring Boot · React · JWT · MySQL · Hibernate · Axios

- Built a full-stack task management app with a Spring Boot REST API backend and a React frontend, enabling full CRUD operations on user tasks.
- Secured all API endpoints using JWT-based authentication and role-based authorization, ensuring only authenticated users can access their data.
- Used Spring Data JPA with Hibernate for ORM-based database operations on a MySQL schema, keeping business logic cleanly separated from persistence.
- Connected React components to backend APIs via Axios, making the UI dynamically reflect task updates without page reloads.

Temperature Data Management System

Dec 2025

Python · FastAPI · React · PostgreSQL · AWS (EC2, S3)

- Built a web platform to ingest, clean, and store public temperature datasets, with a FastAPI backend exposing SQL query endpoints to a React frontend.
- Designed a normalized relational schema and wrote optimized SQL queries, allowing users to filter and visualize datasets through a browser interface.
- Deployed the backend on AWS EC2 with dataset files stored in S3, gaining hands-on experience with cloud infrastructure for a data-heavy application.

ROV Control System

Jan 2025

React · JavaScript · Real-time UI

- Developed a browser-based control interface for an underwater ROV used in national robotics competitions, displaying live sensor readings and navigation data.
- Designed a centralized dashboard that gave operators a unified view of vehicle status, reducing the need to switch between multiple monitoring tools.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, C++

Frontend: React.js, HTML5, CSS3, Bootstrap, Material UI

Backend: Spring Boot, Node.js, Express.js, FastAPI, REST APIs

Databases: MySQL, PostgreSQL, MongoDB, Oracle SQL

Cloud & DevOps: AWS (EC2, S3, IAM), Docker, Git, CI/CD, Agile / Scrum

Tools & Frameworks: Spring MVC, Hibernate, Spring Data JPA, Postman, VS Code

CS Fundamentals: Data Structures & Algorithms, OOP, Computer Networks, OS

ROLES & EXTRACURRICULAR

Robotics Special Team — Embedded Programming Lead

2025 – Present

VIT University

- Lead embedded firmware development for an underwater ROV, integrating sensor modules and control systems on microcontroller platforms.
- Represent the team at national competitions; previously won Third Prize at the National Gujarat RoboFest 2023 (Underwater Robot & Submarine Category).
- Mentor junior team members on embedded programming and hardware-software interfacing.

Artificial Intelligence Club — Member

2024 – Present

VIT University

- Participate in workshops on ML techniques and collaborate with peers on small AI experiments and model prototyping.
